CLAIM AMENDMENTS

IN THE CLAIMS

This listing of the claims will replace all prior versions, and listing, of claims in the application or previous response to office action:

1-13. (**Cancelled**)

14. (**Currently Amended**) A method for transmitting user data messages from a network element of a radio communication system over at least one transmission channel to at least one subscriber device of the radio communication system, the method comprising announcing a form of the user data messages ~~via~~ **by transmission of at least one message comprising** planning information before transmission of the user data messages, wherein the planning information **comprises the form of the user data messages and wherein the** form of the user data messages to be transmitted includes at least one of a data type **of the user data messages** and a coding of the user data messages.

15. (Previously Presented) A method for transmitting a user data messages as claimed in Claim 14, wherein the planning information includes a first planning message by which the transmission of the user data messages is announced via a first separate transmission channel, and a second planning message by which description information specifying the form of the user data messages to be transmitted is transmitted via at least one second separate transmission channel.

16. (Previously Presented) A method for transmitting user data messages as claimed in Claim 14, wherein the data type includes one of a text format, an image format, an audio format and a video format.

17. (Previously Presented) A method for transmitting user data messages as claimed in Claim 14, wherein the coding includes one of an MP3 format, an AMR format, a WAV format, a JPEG format and an MPEG 4 format.

18. (Previously Presented) A method for transmitting user data messages as claimed in Claim 15, wherein the description information further includes parameters referring to one of data volume, image dimensions for at least one of image data and video data, and a playback duration for at least one of audio data and video data.

19. (Previously Presented) A method for transmitting user data messages as claimed in Claim 14, wherein the method is carried out in a framework of a broadcast service.

20. (Previously Presented) A method for transmitting user data messages as claimed in Claim 19, wherein the broadcast service is an extension of a Cell Broadcast Service.

21. (Previously Presented) A method for transmitting user data messages as claimed in Claim 19, wherein the broadcast service is a multicast service.

22 (Previously Presented) A method for transmitting user data messages as claimed in Claim 14, wherein the radio communication system is operated in accordance with a UMTS standard.

23. (Previously Presented) A method for transmitting user data messages as claimed in Claim 15, wherein the first planning message contains information about when and on which second separate transmission channel, of which there is at least one, at least one of second planning messages and user data messages are transmitted.

24. (Previously Presented) A method for transmitting user data messages as claimed in Claim 14, wherein the at least one subscriber device receives only the user data messages which the at least one subscriber device is designed to process.

25. (Previously Presented) A method for transmitting user data messages as claimed in Claim 14, wherein the subscriber device is a mobile radio device.

26. (Previously Presented) A method for transmitting user data messages as claimed in Claim 25, wherein the mobile radio device is a mobile phone.

27. (Previously Presented) A method for transmitting user data messages as claimed in Claim 24, wherein the at least one subscriber device receives only the user data messages which, with regard to the announced form, it is able to process.

28. (**Currently Amended**) A subscriber device of a radio communication system, in which user data messages are transmitted over at least one transmission channel to the subscriber device, comprising parts for receiving only the user data messages which, with regard to an announced form, it is able to process, wherein the form of the user data messages is announced by **transmission of at least one message comprising** planning information before transmission of the user data messages, with the form of the user data messages to be transmitted including at least one of a data type **of the user data messages** and a coding of the user data messages.

29. (**Currently Amended**) A radio communication system, comprising: at least one subscriber device; and

a network element for transmitting user data messages over at least one transmission channel to the at least one subscriber device, wherein a form of the user data messages is announced by **transmission of at least one message comprising** planning information before transmission of the user data messages, with the form of the user data messages to be

transmitted including at least one of a data type **of the user data messages** and a coding of the user data messages.

30. (Previously Presented) The method for transmitting user data messages as claimed in claim 14, wherein the planning information includes at least one planning message which is sent before transmission of the user data messages.

31. (Previously Presented) The method for transmitting user data messages as claimed in claim 14, allowing at least one subscriber device to save at least one of its resources and energy by deciding, on basis of the planning information, to receive only those user data messages it is capable of processing.
